

## **PDI Introduces EPA-Registered Sani-Cloth® Bleach; Sani-Cloth® Now the Only Complete Line of Ready-To-Use Surface Products**

**Orangeburg, NY, June 28, 2011** – PDI, the leaders in infection prevention, introduce a new edition to their surface disinfection product line, Sani-Cloth® Bleach Germicidal Disposable Wipe. PDI now offers an EPA Registered bleach-based surface disinfecting wipe that enable healthcare facilities to comply with the U.S. Centers for Disease Control and Prevention (CDC) Guideline for using a 1:10 EPA-registered bleach solution for disinfection in areas experiencing outbreaks or higher endemic rates of HAIs. Sani-Cloth® Bleach is proven to be effective against 39 clinically relevant microorganisms in just four minutes.

The addition of Sani-Cloth® Bleach completes the PDI Environmental Hygiene System of disinfection products for all areas of healthcare facilities, from high-risk sensitive areas to general, everyday use. The Sani-Cloth® product portfolio includes:

- **Super Sani-Cloth®** for general use (alcohol/quat-based, two-minute contact time, currently tested against 26 microorganisms)
- **Sani-Cloth® AF** for general use, use around sensitive patients, and on sensitive equipment (alcohol-free/quat based, fragrance-free, three-minute contact time, currently tested against 25 microorganisms)
- **Sani-Cloth® Bleach** for high risk areas (EPA-registered, 1:10 bleach solution, four-minute contact time, currently tested against 39 microorganisms)

“At PDI we help providers prevent infections and effectively target zero healthcare-associated infections, save lives and reduce associated costs,” said Dan Marsh, executive vice president, PDI Healthcare. “We have always offered very good products. Now, thanks to our superior product development team, we offer a great environmental hygiene system that includes best-in-class products, unparalleled clinical support and training, and effective compliance aids.”

“Due to the evolving changes within microorganisms, facilities face significant challenges in preventing the transmission of HAIs on a daily basis. With the addition of the EPA-Registered Sani-Cloth® Bleach disposable wipe, PDI now offers customers a pathogen-specific product that meets the CDC Guidelines for Disinfection for those most aggressive pathogens” said Dr. J. Hudson Garrett, Jr., Director of Clinical Affairs.

EPA-Registered Sani-Cloth® Bleach is available in a convenient, ready to use canister and is currently approved in most states with approval in all 50 states expected by December 31, 2011.
