

# PDI TOUCHPOINTS™

## We're here to lend a hand...

Following hand hygiene guidelines is one of the most important steps in breaking the chain of infection transmission. Despite product availability and increased awareness, achieving universal compliance remains an ongoing challenge. PDI support and Sani-Hands® ALC Antimicrobial Alcohol Gel Hand Wipes can help.

Sani-Hands ALC contains 65.9% alcohol and is proven to kill 99.99% of microorganisms. Mechanical friction created by using the wipe removes soil and germs from the skin, and there is no sticky build-up with frequent use. Containing soothing Aloe and Vitamin E, Sani-Hands ALC Antimicrobial Alcohol Gel Hand Wipes have been clinically proven to moisturize skin after repeated use.

*"As a result of implementation of the Sani-Hands product and the invaluable clinical support from the PDI Medical Science Liaison Team, our hand hygiene compliance for our healthcare providers has more than doubled from 42% to over 90% since implementation. The staff highly prefers the Sani-Hands product over the previously used gels, finds the product dries more quickly, and have mounted a canister in every patient room, restroom, and registration desk, amounting to over 650 locations throughout the facility. Due to the leadership of infection prevention and the medical staff, as well as our partnership with PDI, we have made tremendous strides in improving our hand hygiene compliance."*
