SANI-CLOTH® BRAND ENHANCED; GERMICIDAL WIPES PROVIDE ADDED BENEFITS FOR HEALTHCARE

Professional Disposables International, Inc. (PDI®) has enhanced its Sani-Cloth Brand Germicidal Disposable Wipes by changing packaging materials used while giving the products a new look. As a pioneer in infection-prevention products, PDI has also re-engineered the wipe material for Super Sani-Cloth now with a distinctive hexagonal-embossed material containing 40% more wood-based fibers for a greater cloth-like feel and user experience. The new material is 20% thicker than the former diamond-embossed material and is highly absorbent with significantly better fluid capacity.

“PDI is making this change to arm the infection prevention community with a durable but practical substrate material with a low overall 2-minute contact time with 26 kill claims.” PDI Senior Director of Marketing Aime Lenz. “Our company constantly aims to identify state-of-the-art materials and technology and incorporate them into our designs to create innovative products.”

In terms of the look of the products, the new packaging contains less ink and the translucent purple lid contains less pigment. The canisters and lids continue to be recyclable. The extra large canister contains a longer sheet size of 7.5” x 15” while retaining the same square inches per sheet. All reorder numbers remain the same.

For 30 years PDI has pioneered the development, testing, manufacturing and marketing of pre-moistened wipes as the optimum delivery system for skin antisepsis, hand hygiene, patient and surface care. With such trusted brands as Sani-Cloth®, Sani-Hands® ALC, Sani-Hands® for Kids, Hygea® and Chlorascrub™, PDI serves the healthcare market through hospitals, physician and dental offices, emergency medical services, long-term care, schools and a variety of other healthcare facilities. Professional Disposables International, Inc. is headquartered in Orangeburg, New York. For more information, visit www.pdipdi.com.
