## EPA ACCEPTS TWO-MINUTE KILL CLAIM FOR GERMICIDAL WIPES

### Tests Prove Wipes Kill Four Additional Microorganisms

PDI<sup>®</sup>, the Healthcare Division of Nice-Pak Products, Inc., recently received EPA acceptance to reduce the overall contact time on its Super Sani-Cloth<sup>®</sup> Germicidal Disposable Wipe from five to two minutes. In addition to killing 18 microorganisms including MRSA (Methicillin Resistant Staphylococcus aureus) and Salmonella, **the wipes now kill Rotavirus, Human Coronavirus, ESBL-producing E. coli and Burkholderia cepacia.**

“Super Sani-Cloth wipes save healthcare workers precious time by disinfecting and deodorizing all in one product,” says Jean Fleming, R.N., MPM, CIC – Clinical Director of Infection Prevention and Education at PDI. The latex-free wipes have a diamond-embossed texture, making them thick, heavy and strong enough to remove bacteria from surfaces without tearing. “The pre-moistened, quaternary/alcohol-based wipes are suitable for a variety of hard, non-porous surfaces,” continues Fleming, “including carts, counters, exam tables, computer keyboards, patient monitoring and sensitive diagnostic equipment.”

Super Sani-Cloth contains 55% alcohol and kills TB and RSV in one minute; HBV, HCV, HIV-1, MRSA and VRE in two minutes and has been tested effective against a total of 22 microorganisms.<sup>1</sup> Available in large (6 in. x 6.75 in.) and extra large (8 in. x 14 in.) wipe sizes, Super Sani-Cloth comes in 160-count and 65-count canisters with deep-well lids. The large 50-count packets and extra-large individual packets conveniently fit into the Sani-Bracket<sup>®</sup>, a special wall and mobile equipment mounting system. Super Sani-Cloth is part of the Sani-Surface<sup>®</sup> family.
